Summary

Data scientist with three years of experience in quantitative and qualitative research, statistical analysis, and reporting on large, multi-source datasets. Expert in designing research projects, identifying patterns in data, applying descriptive and inferential statistical methods, and communicating findings to technical and non-technical stakeholders through written reports, data visualizations, and presentations.

Experience Highlights

Corcept Therapeutics

Redwood City, CA

Biostatistics Intern

06/2026 – 08/2026

- Matched 120+ external controls from RWD using propensity score, emulating index dates and analyzing outcome with Kaplan-Meier curves, log-rank tests, and Cox proportional hazards models.
- Developed three-tier strategies to guide the venture capital arm's setup, analyzing SEC filings for fund size and constructed portfolios with real-world companies across stages and deal sizes.
- Built and validated patient profiles across ~20 panels in Medidata Clinical Data Studio, mapping data from annotated CRFs and creating derived variables to streamline clinical trial data review.

W74 Advisors

Remote

Data Scientist I

03/2026 – Present

- Designed and implemented quantitative methods tailored to client's needs on building energy usage, spanning problem decomposition, statistical analysis, and evidence-based recommendations.
- Improved predictive performance by 25% over baseline and 33% over industry benchmarks by building and validating 5 models (XGBoost, LightGBM, Random Forest, Transformer, and DNN).
- Delivered multiple concurrent projects 5x faster under tight deadlines using Claude Code.

The Gladstone Institutes

San Francisco, CA

Research Associate

07/2025 – 04/2026

- Developed and optimized *permuteDE*, an R package using permutation testing to reduce false positives by ~80% in differential gene expression analysis.
- Validated *permuteDE* on 10 large-scale public scRNA-seq datasets of Alzheimer's disease, reducing false-positive DEGs across multiple methods (such as Wilcoxon rank-sum, Wald, and LRT test).
- Communicated complex statistical findings to 25+ senior investigators and external collaborators through written reports, manuscripts, data visualizations, and presentations.

Stanford University

Stanford, CA

Graduate Student Researcher

10/2023 – 06/2025

- Built end-to-end pipelines with QC, summary statistics, and rigorous documentation to ensure data integrity and reproducibility in a metabolomics study of Black-White disparities in prostate cancer.
- Applied descriptive and inferential statistical methods (t-tests, PCA, PLS-DA, Random Forest, logistic and linear regression, co-expression analysis) and identified ~50 disparity-associated compounds.

Education

Stanford University, MS in Epidemiology and Clinical Research (GPA: 3.86/4.00)

2023 – 2025

Cornell University, BS in Biometry & Statistics and Biological Sciences (GPA: 3.57/4.00)

2020 – 2023

- Honors: *cum laude*, Dean's List

Skills

- Language: R, Python, SAS (Base certified), SQL, Javascript (D3.js), LaTeX, HTML, CSS
- Tool: Excel, Medidata, SAS OnDemand, RStudio, ipynb, PowerPoint, Word, HPC, AWS, Claude
- Method: Descriptive and inferential statistics, hypothesis testing, study design, quality control, predictive modeling, matching, story-telling, audience-tailored report writing
